MOTIVATION

This navigation course explains how to navigate in SAP Analytics Cloud (SAC). The course addresses students at universities, vocational schools and other educational institutions with no previous knowledge in cloud solution for data analysis and visualization. The content is suitable for frontal lessons as well as as a self-learning unit.

After completing this course, learners will be able to navigate the SAC user interfaces to independently edit various exercises and case studies. All preparations required for later courses are available after completion of this course.

This course can also be used as a reference for occasional users.

DELIVERY METHOD

To edit this case study, a user account for SAP Analytics Cloud is required.

The learning method used is guided learning in the form of a descriptive case study.

The advantages of this learning method are the rapid and comprehensive transfer of expertise and the acquisition of competence for action. Step-by-step instructions and screenshots are used to explain essential operational tasks and processes to learners in detail.

With the help of simple exercises, the learned system knowledge is practically applied and sustainably consolidated.

Step 6: Log out of SAC 18
Tips and Tricks for Operation 19

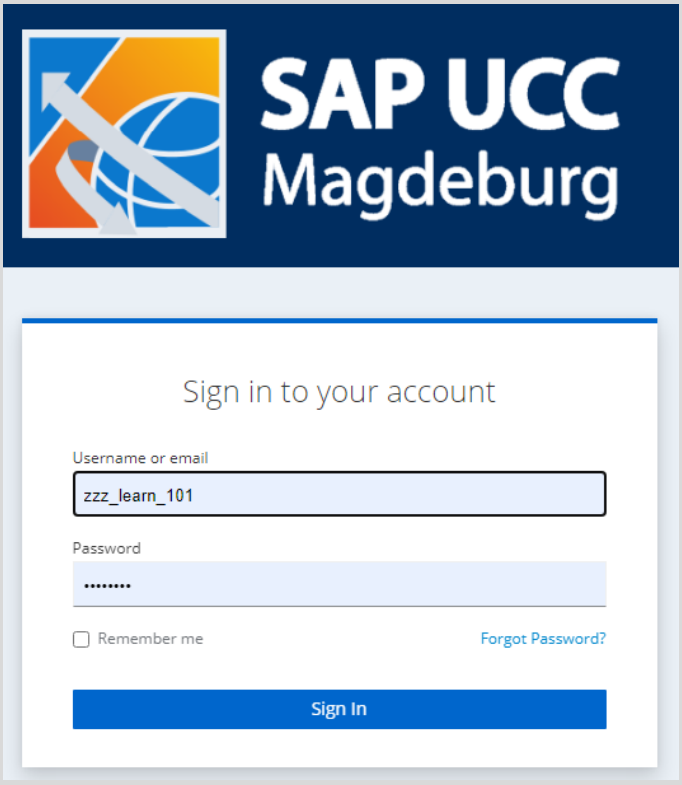

Step 1: Log on to SAC

Task Log on to SAP Analytics Cloud. **Time** 10 min.

Initial Screen

Clicking on the following link takes you to the Identity Management System of SAP UCC Magdeburg. This provides anonymous identities for logging on to SAP cloud solutions according to valid data protection rights.

https://ucc-pilot-sac.eu10.hcs.cloud.sap/

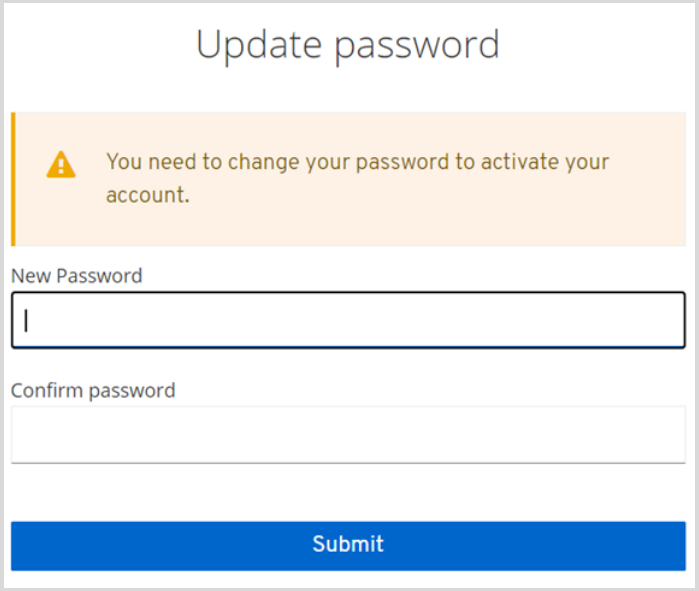

User
Password
Sign In

On the login screen, enter the **user** and **password** provided by your instructor. Then click **Sign In**.

Note If you log on to SAC with this user for the first time and with an initial password, you are prompted to enter a personal password for this user.

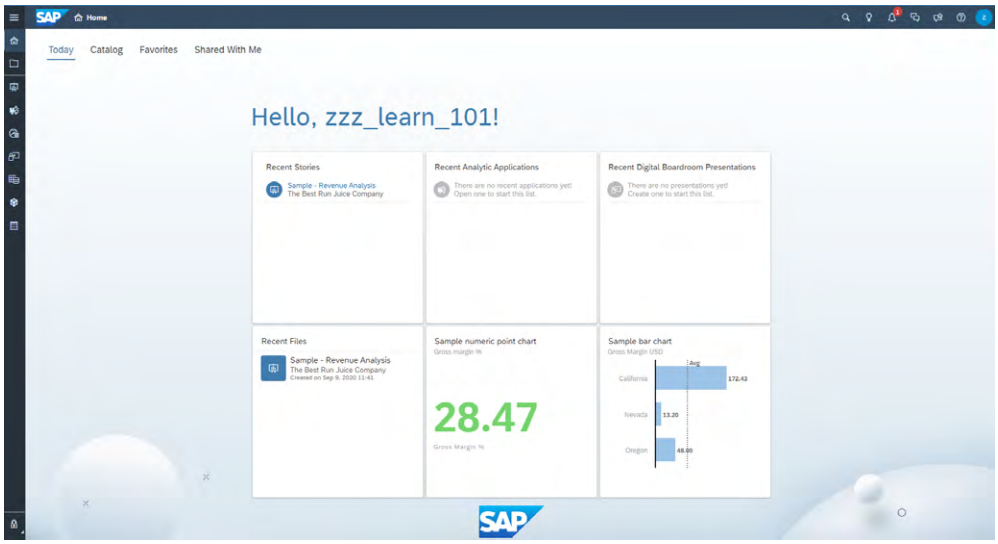

Password of your choice

After you have entered your new password twice in the *Update password* window, confirm with **Submit**.

After logging on, you will be taken to the home *screen*.

Home Screen

Step 2: Make Profile Settings in SAC

Task Make profile settings in SAC. **Time** 5 min.

Initial Screen

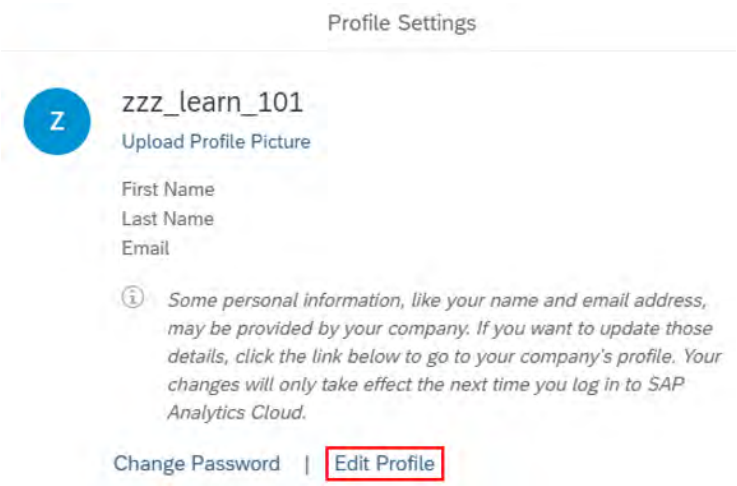

Right after logging in, you first set some important things in SAC. To do so, click  in the upper-right corner and then click *Profile Settings* to make your profile settings in SAC.

Personal Data

Note Your personal data is stored exclusively in the Identity Management System in the SAP University Competence Center Magdeburg in compliance with data protection regulations. Define your e-mail address there urgently. If you forget your password, you can have it reset.

Edit Profile

To do so, click **Edit Profile**.

Account

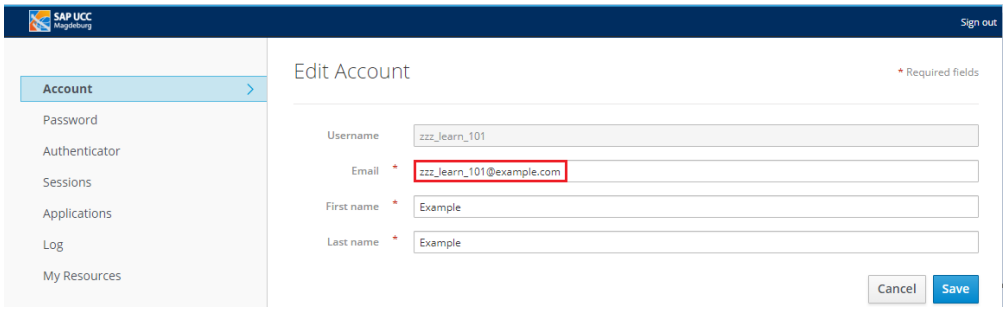

You will now be taken to the UCC Magdeburg Identity Management System where your personal data will be stored in a gdpr compliant manner. Click Account here**.**

Email Address
First Name
Last Name

Enter **your email address**. Optionally, you can also enter your **first** and **last name**.

Save

Save your changes with  . From now on, you can reset your password yourself if necessary.

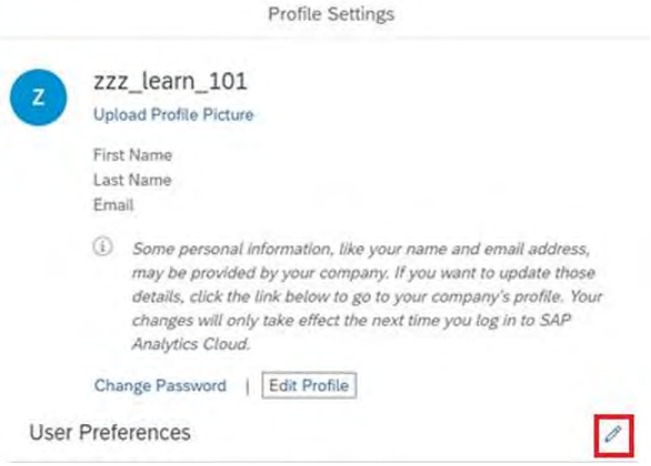

With the settings you have made, you have also ensured that you can edit the following exercises and case study according to the instructions and can be informed by email when another user shares content in SAC with you.

Profile Settings

Now close the browser tab with the Ucc Magdeburg Identity Management System. You should see the SAC *Profile Settings* window again.

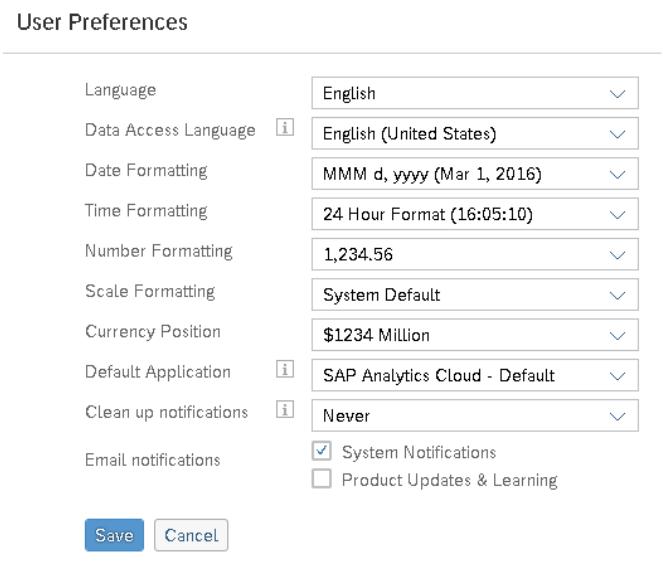

Edit

Please change the User *Preferences*. To do this, choose **Edit** ( ) on the right-hand side of the screen.

Save

Change the settings in the dropdown menus as shown below and then confirm your entries by choosing **Save**.

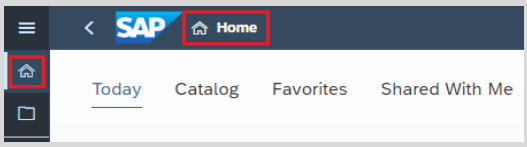

Step 3: Build SAP Analytics Cloud

Task Familiarize yourself with the individual areas and functions of SAC. **Time** 10 min.

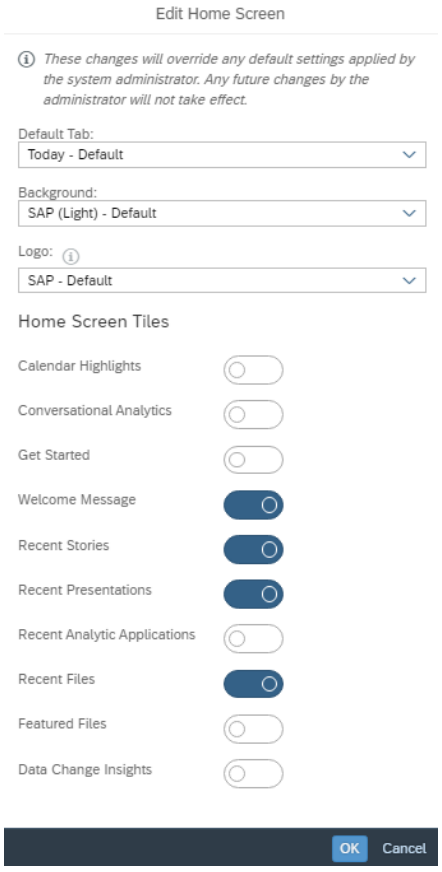

Initial Screen

You should now be back on the home screen, as you can see in the top left menu bar.

Home Screen Settings

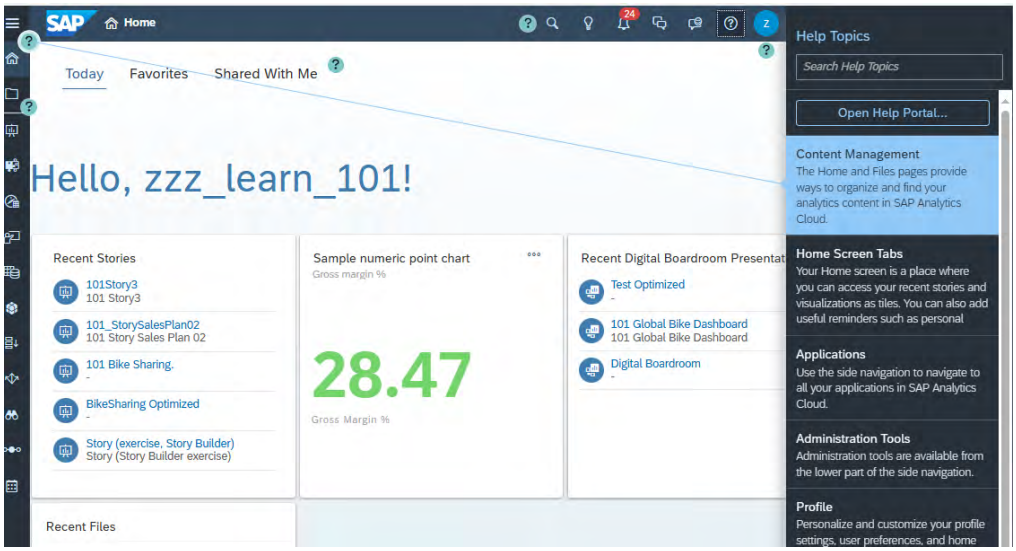

On the SAC home page, the icon (*Search*), (Just Ask), (*Notifications*), (*Collaborations*), Feedback, (*Help*), and your profile symbol (*Profile*) are displayed one after the other in the upper right corner. Click the icon. You have already made settings for your profile. By clicking home *screen settings*, you can set your home screen as you like.

Confirm your changes with OK if necessary.

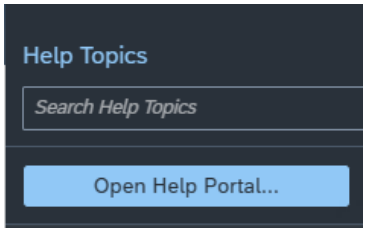

Help

SAP Analytics Cloud has interactive help. If you click the icon to the left of your profile icon, the *SAP help topics* open.

Open Help Portal

Other buttons take you to content management, home screen tabs, applications, administration tools, profiles, learning videos, and other helpful content, as needed. Take a look around. Clicking Open **Help Portal** takes you to the SAP Analytics Cloud Help page.

Help

If you click the Help icon again, the *SAP help topics* close again.

Collaboration

Use the icon to open the *Discussions* area. Here you can start and manage new conversations with individual or groups of users. The functions available are similar to those of a classic chat. Please only start conversations with people you know. By clicking on you hide the area again.

Feedback

Click the icon to open the SAP Analytics Cloud feedback page in Internet Explorer, where you can write your personal feedback about the SAP product SAP Analytics Cloud.

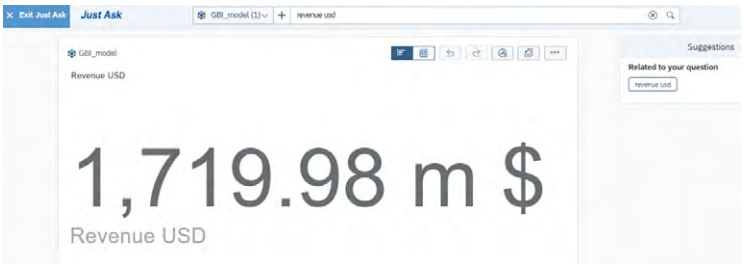

Notifications

By clicking on the icon you get relevant notifications about new functions as well as important system information. You can delete them individually or collectively.

Just Ask

The just Ask feature in SAP Analytics Cloud allows to access natural language inputs to quickly get answers or insights from their data. You can ask simple questions, and the function converts them into queries, which then

provide visual results or charts. This facilitates access to data analysis without deep technical knowledge.

Search

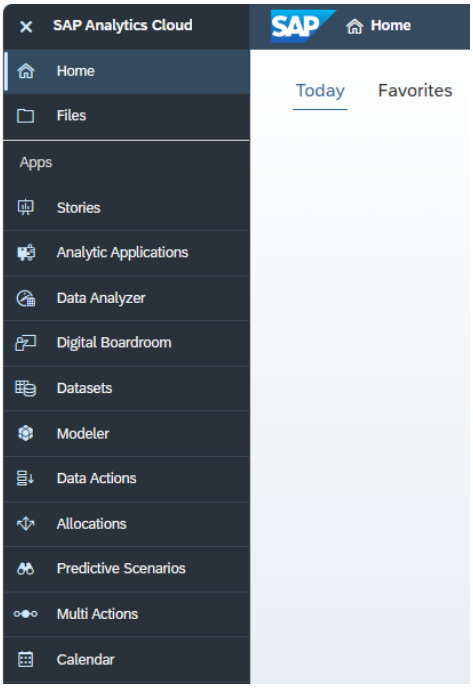

To search for all types of SAC objects, you can use the search icon . In the text field that opens, you can use any characters, for example: Your personal ID ###, which you have received from your instructor. If you have already worked in this SAC tenant, the system displays a list of all objects for this character string.

In the upper left corner, you can choose the SAP icon to return to the home screen.

Navigation Bar

On the left is the main menu. Clicking on the **Expand Navigation Bar** icon displays all menu items and their descriptions.

As with the SAP icon, clicking **Home** always brings you back to the *Home screen*.

Files contains all SAC documents that you can access in a folder structure.

In *Stories*, you can create a *story* and add charts, tables, text, and other objects.

With *analytic applications*, you analyze your data by interacting with applications for *data analysis* and *planning*.

Data *Analyzer* is an analytics tool that allows you to perform ad-hoc queries and data analysis on live data connections as interactively as possible.

The *Digital Boardroom* allows you to create responsive boardroom presentations as an agenda or dashboards.

With *datasets*, you prepare your raw data with a *flexible table format* and start with scenario analysis.

Under *Modeler*, you can prepare your raw data with a *structured view*.

Data actions enable you to automate data processes and perform complex data management tasks within planning applications.

The *Allocations*  feature in the SAP Analytics Cloud is a tool within the planning module that allows you to allocate or allocate costs and revenues within your financial models.

With *Predictive Scenarios*  answer business questions that require predictions and predict future events, outcomes, or behavior patterns using data analysis, statistical algorithms, and machine learning

The *Multi Actions*  feature allows you to combine different data-related actions and implement them as an end-to-end workflow, making the planning process more efficient and error-resistant.

Calendar  allows you to maintain a *private* or *group calendar*, *Gantt charts*, and *task lists*.

In the menu option *Security*  , you can display teams, roles, and requests for rights, but you cannot change them.

Under *Connections*  , you can add and manage new *connections*.

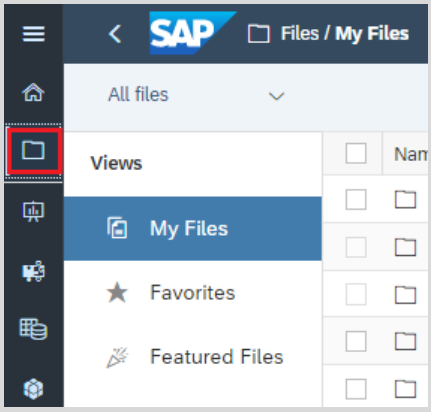

After clicking *system*  , you can get up-to-date information about the SAC tenant under *About*  .

Step 4: Create your own folders

Task Create a personal folder structure for the exercises and case studies. **Time** 10 min.

On the home screen, click (*Files*) in the upper left corner.

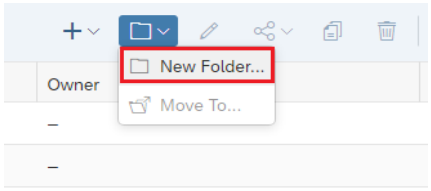

Initial Screen

Note Make sure you are in the main *My Files* folder.

In the menu bar on the right, click (*Folder actions*) and then click ***New Folder…***.

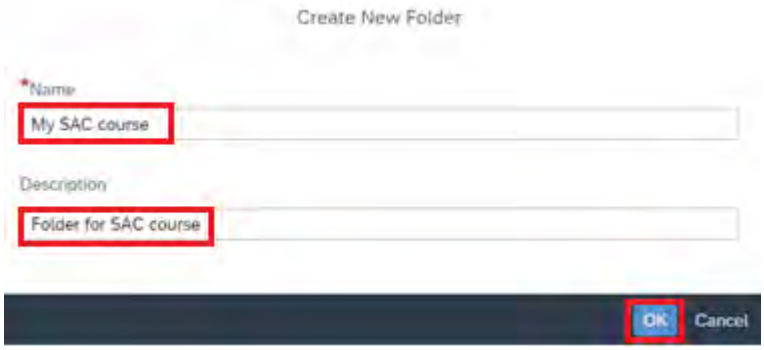

New Folder…

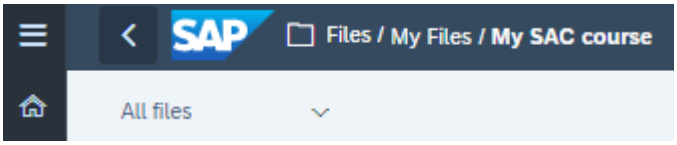

To make it easier to distinguish your folder from others, enter a **name** of your choice in the *Name* field, for example: My SAC course and in the *Description* field, enter an optional **description**. Confirm your entries by choosing ***OK*** to create the folder.

Description
Description

Ok then

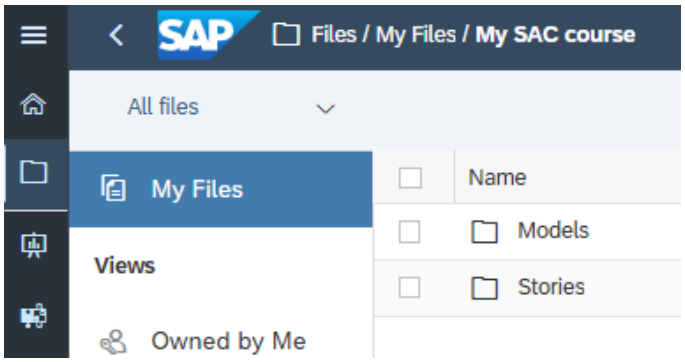

Open the new folder by clicking it. In the top bar, you can see the respective folder path. By clicking on *My Files*, you can go back to the general overview of all folders and documents. But stay in this folder at first.

Subfolders

For better structuring, create subfolders. To do this, create the following folders, as you have just done:

- Models
- Stories

Step 5: [OPTIONAL] Share Folder

Task Share a newly created folder. **Time** 10 min.

Release

You can share both the overall folder and the subfolders in SAC with other users or *release* them for different activities. You then create another folder that you share with your instructor, for example: Submit your results of a case study for evaluation.

[XYZ]123

Click on *My Files* to return to the general overview of all documents that are visible to you. Choose the main folder of your course, indicated by the three identification letters of your university (**XYZ**) and a three-digit sequential number.

[XYZ]123_Group#

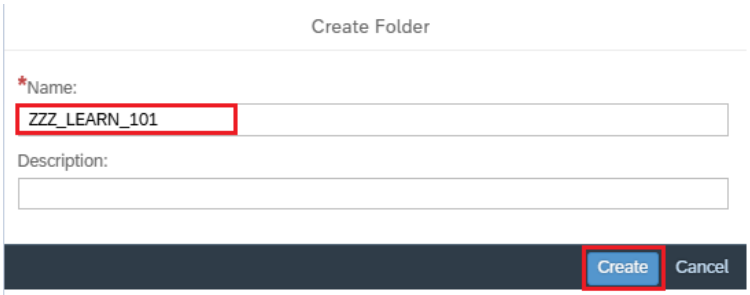

If necessary, you can find an additional folder for your part course or Your group called *[XYZ]123_Group#*, where [XYZ]123 should be your team and # should be your group. If you see more than one folder, ask your instructor for the right one. Click on this folder.

User

Create

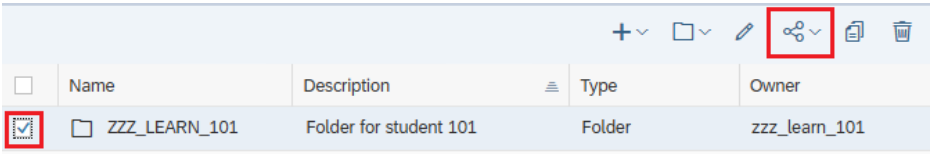

Now create another folder as described above. For *the name*, use the **user** with which you are logged on to SAC. The *Description* field can remain empty. Confirm with **Create**.

Note This folder initially inherits the same rights as the main folder. Normally, this should mean that all users of your institution can see objects in this folder and possibly even manipulate them. Please follow the instructions below carefully to restrict access rights only to your instructor and yourself.

Share Folder

To do this, click  to share the new folder.

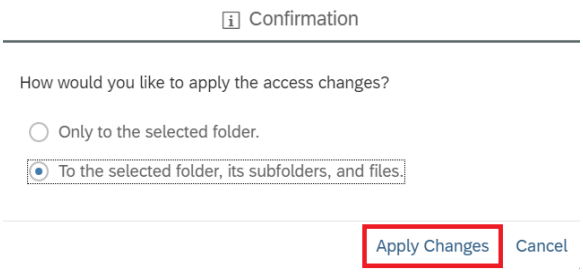

In the *Share Folder* pop-up window, in the *Shared with 1 Team* area, delete the *Team: XYZ* from the list by selecting the entry and then clicking .

Authorizations

In the next *confirmation* window, choose **To the selected folder, its subfolders, and files** and click **Apply Changes**.

To the selected …
Apply Changes

Only your instructor and you should now have access to this folder. Make sure that your instructor has *full control* in the *Access* column.

Note If the entry for your instructor is missing, click in the *Add Users or Teams* area and select the user of your instructor in the format **[XYZ]_TEACH_###**. If you do not know the account, contact your instructor.

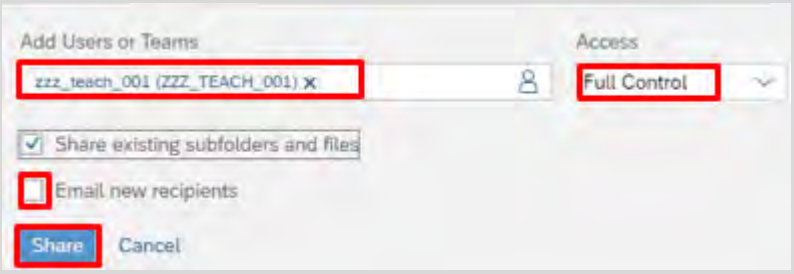

[XYZ]_TEACH_###

In the *Access* dropdown menu, choose **Full Control**.

Full Control

Deselect the Email *new recipients* checkbox and click **Share**.

~~E-mail new recipients~~
Share

Finally, click **Close**.

Close

Note You have created two different folders. One for yourself (*My SAC course*) and a second, which your instructor can also view (*XYZ_LEARN_###*).

Explanation

When you edit the exercises and case studies, you first save your objects in your *personal folder*.

Personal Folder

If your instructor asks you to submit your work result, copy your object to the *instructor folder*. At the end of each exercise and case study, there is an optional step that explains the procedure.

Instructor Folder

Note It is important to note that you share your folders, subfolders, and files with users of your institution at the most. If you are not sure, please ask your instructor in advance.

Step 6: Log out of SAC

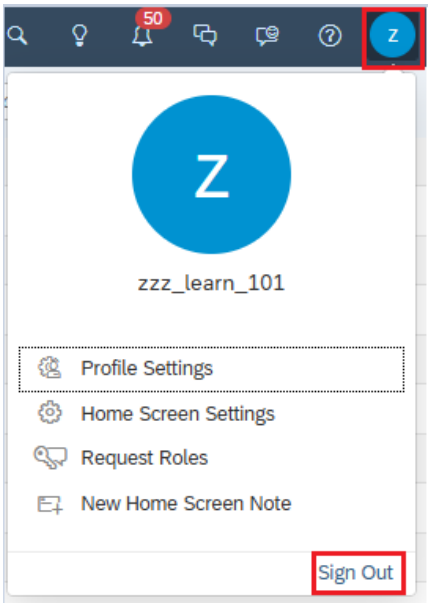

Task Log off from SAC successfully. **Time** 5 min.

You are logged on to SAC and want to log off.

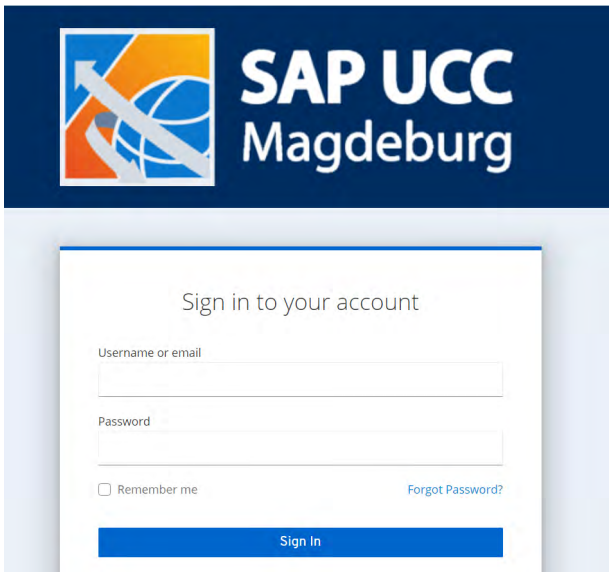

Initial Screen

Sign Out

To log out of SAC, you need to click on  in the upper right corner. Then choose **Sign out.**

Once you have logged off successfully, you return to the logon screen for the Identity Management System of SAP UCC Magdeburg.

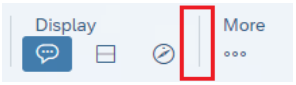

Tips and Tricks for Operation

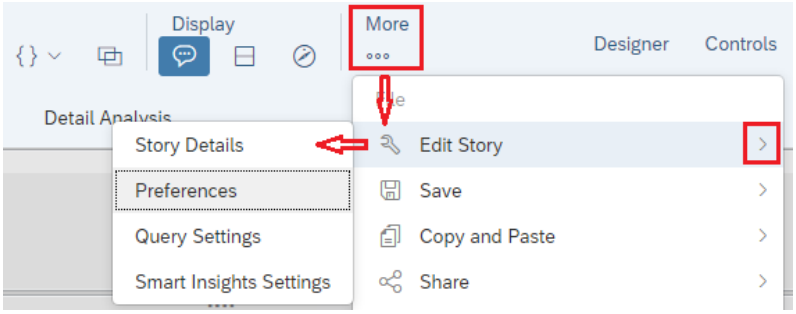

This section provides you with additional useful information for using SAP Analytics Cloud.

Display of main menu for relatively small screens

If your screen is relatively small, it may happen that not all entries of the main menu are visible, but are truncated.

If you click on *More*, the missing menu entries are displayed in a hierarchical menu.

Display of page elements for relatively small screens

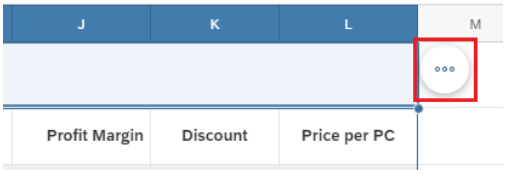

If your screen is relatively small, it can happen that not all data of a table becomes visible, even after using the page scrollbars.

With a single click on any table cell, further scroll bars appear. This takes you to the end of the table.

The same applies if you want to use the context menu (*More Actions*) next to a page element such as a table or chart and this is not visible due to your screen size. Again, click in the page element and scroll all the way to the right.

Exporting a Story

In SAP Analytics Cloud (SAC), stories provide a comprehensive way to analyze and visualize data. You can create interactive reports and dashboards that visualize key business metrics. A useful feature of SAC is the *exportability* of these stories.

You can export stories in various formats, including:

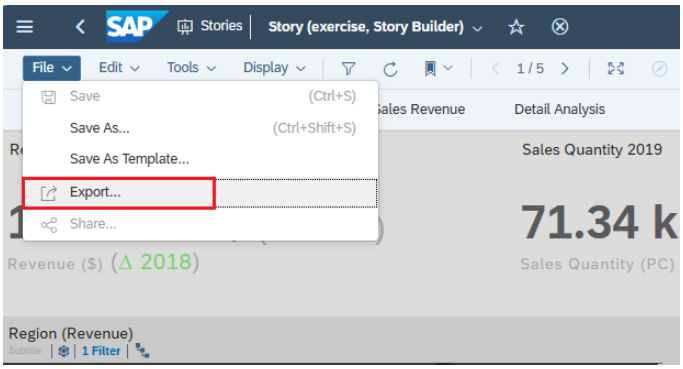

- PDF: For a non-interactive, static report that is good for presentations or printing.
- PowerPoint (.pptx): This allows you to convert your stories directly into presentation formats, for example, for business presentations.
- CSV: if you want to extract raw data from a story to further process it in other applications.

When exporting, you can select which parts of the story they want to include, such as specific pages or charts. You can also adjust the layout and formatting settings to meet the requirements of the report recipient.

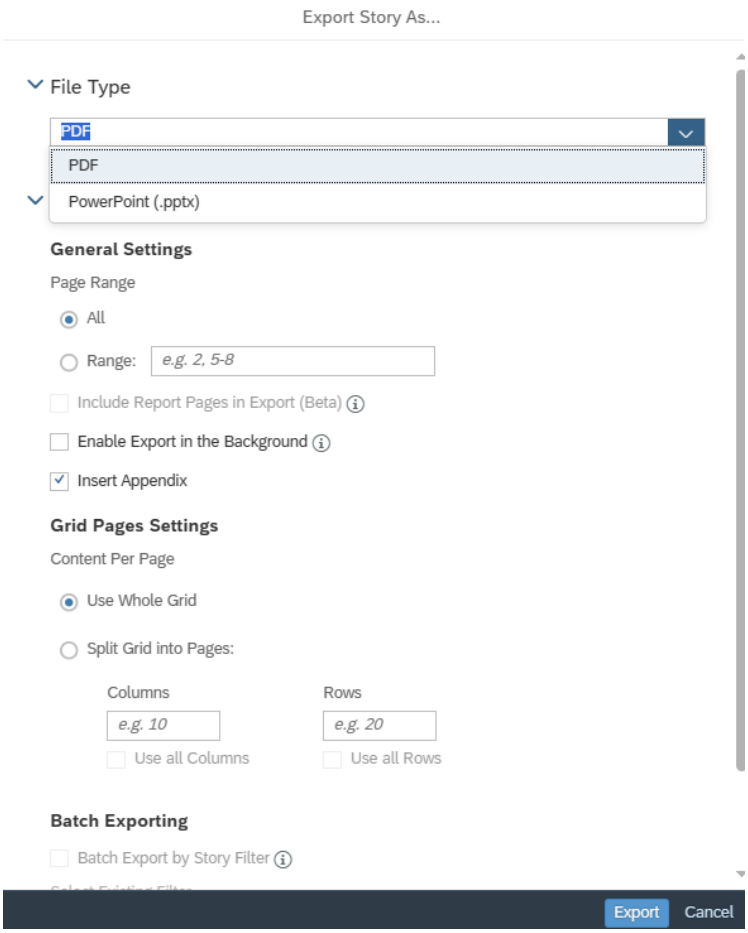

It is important to note that when exporting to static formats such as PDF, interactivity is lost, that is, filter actions or drill-down functions are no longer applicable in the exported document. For this reason, you should carefully consider which format is most suitable for your purpose before exporting.

Open the story you want to expose and make sure you are in view mode.

Navigate to *File* and click *Export*.

You can now choose the file type and make general settings for your export.

Export Story As...
File Type
PDF
PDF
PowerPoint (.pptx)
General Settings
Page Range
All
Range:
e.g. 2, 5-8
Include Report Pages in Export (Beta)
Enable Export in the Background
